STEP 2: TESTING

- Do not eat, drink, smoke, or chew gum 30 minutes before giving your sample.
- Immediately before the test, take small sips of water and swish around the mouth to clean any remaining food particles, and swallow.
- All testing will be completed be a trained staff member
- The Oropharyngeal test collection will be administered by the staff as follows:
    1. Remove capped container from biohazard bag (retain bag and swab).
    2. Verify the patient's name and date of birth.
    3. Write the patient's date of birth on a vial using the format MM/DD/YYYY. Ask a patient to visually confirm that the information is correct.
    4. Label the vial without covering the collection kit's QR code.

5. Open swab packaging, leaving swab tip in the packaging. Loosen and remove the cap from the tube.
6. Ask the patient to open-mouth wide and tilt head back.
7. Depress tongue with tongue depressor so the oropharynx is visible.
8. Insert swab into mouth, taking care to avoid contact with tongue, cheeks, palate, or uvula.
9. Rotate swab several times over posterior oropharynx and tonsils to obtain specimen.
10. Place swab into tube. Break swab at break-away point or break to fit comfortably into the tube. Visually confirm lid is tightly screwed on straight and completely.
11. Place sealed tube back into biohazard bag.
12. Place absorbent material in biohazard bag.
13. Push any air out of the bag and seal.
14. Place in second biohazard bag, push out air, and seal.
15. Place the double-bagged specimen in the large bag inside the cooler or refrigerator.
16. After collection completion, transport cooler to warehouse.
